SUMMARY

AI-native developer specializing in RAG systems, LLM integration, and production AI pipelines. Shipped multiple end-to-end AI products including a hybrid retrieval system over 5,800+ technical clauses achieving 0.94 recall@6 and 100% groundedness. Focused on building reliable, grounded LLM applications from architecture to deployment.

TECHNICAL SKILLS

AI / LLM: RAG Pipelines, LLM Integration, Claude API, Hybrid Retrieval (BM25 + Dense), Prompt Engineering, Fine-tuning (LoRA / QLoRA), Embeddings, LangChain, LlamaIndex

Languages: Python, TypeScript, SQL

Vector Databases: pgvector, ChromaDB, Pinecone, Supabase

Tools & Infra: FastAPI, Docker, PyCharm, Antigravity, Git

PROJECTS

3GPP Standards RAG Assistant | Python · FastAPI · BM25 · Dense Embeddings | github.com/withhumanrevenge-cyber/3gppRAG

- Built a retrieval-augmented QA system over 8 real 3GPP 5G specifications (5,822 normative clauses, 11,590 chunks) enabling precise natural language querying over dense telecom standards.
- Implemented hybrid BM25 + dense retrieval fused via reciprocal rank fusion — eliminating 0% top-1 accuracy failure of dense-only retrieval on identifier-bearing queries; shipped a 4-stage defense pipeline achieving 0.94 recall@6, 100% groundedness across 84 claims, backed by 86 offline tests.

PulseBoard — GitHub Analytics Dashboard | Python · RAG · pgvector · Supabase | pulse-board-woad.vercel.app

- Built a GitHub analytics dashboard with RAG-powered natural language search enabling developers to query repository insights in plain English; reached 50+ organic users at launch with zero paid acquisition.
- Identified and resolved a pgvector RLS misconfiguration causing silent retrieval failure in the semantic search pipeline.

Self-Updating Developer Portfolio | Next.js 15 · React 19 · Three.js · Framer Motion · GSAP · Tailwind CSS | portfolio-nine-mocha-az3ureq1s5.vercel.app

- Built a fully automated portfolio that syncs with GitHub REST API on every push — projects, stats, and contributions update live without any manual intervention.
- Implemented 3D visuals with Three.js, page transitions with Framer Motion and GSAP, and a custom Tailwind CSS design system for a distinctive, high-performance UI.

JobAgent — Dual-Sided AI Agent Platform | Python · LLM Agents · Claude API · FastAPI | getjobagents.xyz

- Building a dual-sided AI agent platform automating job discovery and application tracking for candidates, and intelligent candidate sourcing for recruiters using LLM-powered agents.
- Designed multi-agent architecture with tool use for automated job matching, skill-gap analysis, and recruiter-candidate pairing.

EXPERIENCE

Application Developer | Kaleidonex | July 2025 – September 2025

- Built a full Blood Bank Management System with donor, recipient, and admin modules — handling real-time data, role-based access control, and multi-module state management.
- Integrated Firebase and MySQL with frontend applications; implemented API authentication, data security patterns, and real-time sync across system modules.

EDUCATION

B.Tech, Computer Science | NIMS University, Rajasthan | 2026
